Inflammation confined to the left side of the face. Continues the lotion.</p> <p>The whole face is inflamed and there is considerable pain of the stomach and bowels slightly out of order – Continue the Lotion.</p> <p><i>Rx. Mag: Sulph: ziiij</i> <i>Pulv: Rhei g^r. x</i> <i>Aqua Menth Zij. Mft: haust: stat. sumend.</i> <i>Rept. Pil: h.s.</i></p> <p>Face much inflamed and p[.....] so much smaller as to prevent her opening the Eyes – Considerable fever. Bowels moderately opened by the medicines. Experiences relief from the Lotion which is to be continued.</p> <p><i>Rept. Haust: et Pil:</i> <i>Cont. Remedia u.a.</i></p> <p>Face somewhat better, complains of a bilious taste in the mouth and griping in the bowels. Confusion of ideas – <i>Ol: Ricini Zj. mane.</i></p> <p>General improvement Aperients and Bitters were ordered. The stomach and bowels soon got into a healthy state. The Inflammation subsided & the Gen^l health improved.</p>
<p>Fracture of the Fibula</p>	<p>3</p>	<p>Miss C. McCullagh Aged 27 Matron 25th January 1851 at sea Discharged cured 12th March 1851</p> <p>13th</p>	<p>On the evening of the 25th March (January?), it blowing a heavy gale at the time, Miss McCullagh in going down to lock the door of the starboard prison was thrown from the upper steps of the ladder into the square of the hatchway. She fell on her feet but on trying to use the left she experienced considerable pain in the foot and leg. On examination the fibula proved to be fractured about three inches above the ankle and the parts much discoloured. She sustained several contusions in various parts of the body. She must therefore in falling have struck against the coaming and sides of the hatchway, ordered cold applications.</p> <p>Leg and foot much swelled and discoloured. General soreness of the body An aperients and cold applications.</p>

		<p>18th Swelling of the leg subsiding dorsum of the foot much inflamed cold applications to be continued</p> <p>25th Swelling and inflammation of the foot continues - indicating severe injury no constitutional disturbance - applied a starch Bandage to the foot and leg.</p> <p>28th The foot being very painful removed the bandage. The swelling has partially subsided but there is considerable pain in the foot and a deep blush of inflammation of the dorsum. Ordered fomentations.</p> <p>February 5th The swelling and inflammation of the foot has in a great measure subsided leaving much pain on moving the foot. Starch Bandage.</p> <p>15th Leg improving. Still much discoloured. Foot continues very painful and the [.....] a degree of swelling and inflammation, cold bathing and a common bandage.</p> <p>25th The leg is much stronger and the discolouration has disappeared. The swelling of the foot continues and there is considerable pain felt when any attempt is made to use it. The inflammation has subsided. Otherwise in good health. Ordered Liniment and Bandage. From this date the foot continued to improve and she was able to resume her duty on the 12th March.</p>	
<p>Marasmus</p> <p>JPG PB051052</p>	4	<p>Mary A. O'Brien aged 1 yr. Convicts child 12th Jan^y 1851 At Kingstown Died at sea 31st Jan^y 1851</p>	<p>This child was embarked in the last stage of Marasmus. <i>Hydrarg: c Cretæ Mist. Cretæ comp</i> and various other remedies are given without the slightest benefit. It gradually sunk & expired on the shown date.</p>
<p>Dysentery</p>	5	<p>Marg^t. Ruttledge Aged 56 Free Settler 4th Feby 1851 at sea Died on Board 4th March 1851</p> <p>Vespere</p>	<p>This woman had been in the Dublin Workhouse for a length of time, where she suffered very much from Bowel complaints. She is at present in a very weak and emaciated state. She has suffered from Sea Sickness during which the purging subsided but she was much annoyed by griping and flatulence- and for which she has had medicines on several occasions. Latterly the purging has been more troublesome and is attended with slight protrusion of the rectum after each stool. There is severe griping and some tenderness over the abdomen with slight nausea. the pulse is accelerated. Skin dry but cool. Fomentations</p> <p><i>Rx. Ol: Ricini Zfs.</i> <i>Tinct: Opii g^{tt} viij</i> <i>Aqua Menth Zij. statim</i></p> <p>The oil has operated, stools very unhealthy. Considerably easier</p> <p><i>Rx Pil: Hydrarg g^r iij</i> <i>Pulv: Ipecac : g^r fs</i></p>

During the time she remained on board she had neither headache or fits and got both stout and [fat?] healthy</p>
JPG PB051055 Cholera	7	<p>Johanna Scanlon Aged 25 Convict 15th February 1851 at sea Died. 29th February 1851</p>	<p>16th</p> <p>A delicate looking woman, advanced in pregnancy and has suffered very much from sea sickness since she left Kingstown. the bowels have been very much out of order generally confined. requiring the frequent use of aperients medicines. Emaciation. Latterly she has had a slight diarrhoea, for which and her advanced stage of Pregnancy (between seventh and ninth month) I considered it advisable to confine her to the Hospital. the bowels are relaxed. the stools being scanty, watery and passed with much griping. Slight nausea & much debility. <i>Rx. Ol: Ricini Zij</i> <i>Aqua Menth Zifs. mane</i></p> <hr/> <p><i>Tinct Opii g^{tt} xvj</i> <i>Aqua Menth Zj h.s.s.</i></p> <p>Slept well and feels much better this morning. Still rather loose in the bowels stools more healthy and passed</p>

<p>JPG PB051056</p>		<p>18th</p>	<p>without griping. <i>Rx. Pulv: Rhei gr xii</i> <i>Tinct: Cinnam: zj</i> <i>Aqua Menth Zj. Ft haust: mane sumend:</i> Has passed such a comfortable night and day that I did not deem it necessary to give her any medicines yesterday. Toward morning she was seized with vomiting and purging. cramps in the extremities and general coldness of the surface. the tongue and mucus membranes of the mouth were cold, pulse not perceptible at the wrist, Hands shriveled with blueness of the nails. Saline mixture with Tincture of Opium were given and rejected. Warm port wine negus. Tincture of Lavender Tincture of Opium in mint water was not rehibited? and retained. Warm fomentations and bottles filled with hot water were applied. the stimulants to be repeated as often as necessary. In the afternoon she had a short disturbed sleep. After which the cramps returned but with less violence than at first. the general coldness continues. She has also slight headache and griping. the vomiting and purging has apparently subsided, the same remedies were persevered in and general frictions etc ordered, In the evening she had a scanty fluid stool passed with much straining? and griping and apparently a very small quantity of the Liquor amni escaped. The parts were not dilated and in her then state of of (sic) exhaustion even had such been the case the child could not have been removed, without causing immediate death. The stimulants etc were persevered in and I remained with her to take advantage of any favourable change, about 10p.m. the surface of the body shewed slight signs of returning warmth but the extremities continued cold but on the whole there appeared to be a slight degree of reaction. She said she felt inclined to sleep and about 1:30 she had about two hours tolerably quiet sleep. After this she sank gradually and expired at 6 a.m. 19th February 1851.</p>
<p>Constipation</p>	<p>8</p>	<p>Marg^t Flynn Aged 25 Convict 19 February 1851 at sea Discharged cured 17th March 1851</p> <p>Vespere</p>	<p>This patient is a soft, flabby woman greatly frightened about her present state. She has been suffering for some time past from very great derangement of the digestive organs; she has severe headache, nausea and constipation of the bowels. the latter not having been moved for several days, the tongue is fowl. pulse accelerated, temperature somewhat increased. <i>Rx. Hydrarg Chlorid g^r vj. mane</i> <i>Mags. Sulph. Zfs. hora meridian</i> Bowels not moved. Symptoms continue unabated. <i>Rx. Hyd. <p>JPG PB051066 Marasmus</p>	<p>2</p>	<p>Bridget McMahon Aged 1¼ Convicts Child 18th April 1851 At Sea D.D. 19th April 1851</p>	<p>A miserable looking object with a large head and emaciated frame, was embarked in this state, having according to the mother's statement been in a declining state of health for some months, the commencement of which she attributed to exposure and want of the common necessaries of life. Since she first came under my notice, at Kingstown, the bowels have been very irregular. Generally relaxed and the stools unhealthy. the last month they have been tolerably regular- still the wasting continued. The appetite varied but generally speaking it was most voracious. <i>Hyd: c Creta: Pulv: Rhei Ol; Ricini et Tinct? Creta</i> were all tried with temporary benefits as also various kinds of food. Last evening symptoms of exhaustion became more marked and this morning at 10:30 it expired.</p>
<p>Ophthalmia</p>	<p>23</p>	<p>Cath^c Clark Aged 22 Convict 11th may 1851 Hospital Hobart Town 2nd June 1851</p>	<p>Of an irritable strumous habit. Suckling a strong child. Was discharged on the 8th cured of an attack of dysentery, presented herself this morning with inflammation of the right eye, attended with moderate pyrexia, fomentations were ordered and an aperient. the next morning both eyes were inflamed, calomel and opium was ordered and blisters to the temples and afterwards behind the ears. as also a solution of the <i>Argent: Nitrat: g^r vi ad Zj Aq?</i> the left eye improved rapidly but the right when all but well would suddenly become inflamed. the mouth was touched by the calomel. Latterly she had improved under the use of Quinine & then Sol: Argent but as the prisoners were about to leave the ship she was sent to Hosp^l.</p>
<p>Abscess</p>	<p>24</p>	<p>Mary Carroll Aged 18 Convict 16th April 1851 At Sea Hospital at Hobart Town 30th May 1851</p>	<p>This patient is of a strumous habit and she has been leading an irregular life in Dublin which has not improved it much, In a quarrel with one of her messmates, some days ago, she fell against one of the bed places. She did not experience inconvenience therefrom until yesterday, when she began to feel pain about the hip joint. There is no displacement or symptoms indicating inflammatory sections. Ordered a Purgative, to be kept quiet & the hip fomented. Small doses of <i>Pulv: Ipecac. C.</i> at bed time. the pain continuing counter initiation(sic) by the <i>Emplast Lyttæ</i> was had recourse to; and the appetite being much impaired and considerably falling of in flesh Quinine was given and light nourishing diet ordered. On the 4th May indistinct fluctuation could be felt, and on the 8th a deep seated abscess over the Ilium was laid open and a large quantity of pus discharged. Cataplasms, Quinine and wine soon made a general improvement, and at the time of her discharge to Hospital, she was able to walk about the deck.</p>

Contusion	25	Mary Kennedy Aged 50 Convict at Sea Hospital at Hobart Town 30 th May 1851	A pale unhealthy woman, looks at least 70, could not be induced to take either the Lime Juice or the wine on the voyage. Struck her left leg a few days ago against a bucket. There is slight discolouration over the shin and surrounding parts are inflamed. the bowels are confined, A purgative, Cold Lotions. The inflammation subsided in a short time but a small abscess formed required opening, She complains much of debility. Cataplasms Quinine and wine were ordered. She was discharged with the other patients somewhat improved in health.
JPG PB051067 Scrofulous Abscess	26	Marg ^t Murray Aged 26 Convict 24 th May 1851 At Sea Hobart Town, Hospital 30 th May 1851	A miserable, helpless, dirty, strumous creature, suckling a young and wretched looking child. Has several tumours about the neck, latterly one made its appearance in the Popliteal space, or fossa, right leg. which soon suppurated and was opened. Cataplasms, aperients, tonic and nourishing diet caused a general improvement. As she was not quite well she was discharged with the others to the Hospital.
Insanity	27	Catherine Walsh Aged 26 Convict 27 th May 1851 At Sea Hobart Town Hospital 30 th May 1851	This woman, the other prisons informed me, was, in the Infirmary in Grange Gorman Prison (at the time the ship arrived in Kingstown) under treatment for Insanity, a disease which appears to be hereditary, she having a brother an inmate of one of the Lunatic Asylums in Dublin. In one of her lucid intervals she was <u>brought forward</u> by the <u>Medical Officers</u> of the establishment, who took care not to give me the slightest information on this subject and being tolerably healthy looking she was passed and embarked. The night before we sailed, from Kingstown, she had a severe relapse and required, from her violence, to be confined in a strait waistcoat. The seasickness quietened her for a time and it was taken off - after this she became more violent, scratched and ill used the nurses and her screams were dreadful. She was bled. The head shaved, & blistered & Purgative, alterative and sedative medicines given and in the tropics, a cold bath. The latter appeared to have a good effect, so far, that she settled down into a quiet partially idiotic state and so continued with very little amendment until the time she was sent to Hospital.

<p>Enteritis</p> <p>JPG PB051068</p>	<p>28</p>	<p>Mary Leonard Aged 18 Convict 2nd May 1851 At Sea Disch^d cured 30th June 1851</p>	<p>The subject of this case is a very slight, pale girl of strumous habit, has suffered from irregular menstruation and a costive state of the bowels since first embarked. She stated that she has not had a stool for several days and that she felt uneasiness at the stomach, constriction of the chest, and slight headache and pain in the back, skin cool, pulse tranquil, tongue white.</p> <p><i>Rx. NOTE.—Medical Officers are desired particularly to Notice that the Numbers in each Disease and the general Total must not only correspond with the Sick Book, but also with the particulars contained in the several Nosological Returns for the period.						

GENERAL REMARKS

The Authorities in Dublin embarked on board the "Blackfriar" Hired Transport, on the 9th & 11th January 1851. Two hundred and sixty convicts; Fifty-nine children belonging to the convicts, and seven free settlers. I need scarcely add they were of all ages, and temperaments, and many of them whose constitutions were greatly impaired by privation, imprisonment and disease. A large proportion of the children had recently arrived from the provincial workhouses; and more miserable looking objects, than some were, could not easily be procured. A few were in the last stages of marasmus, others had lost one or both eyes from Purulent Ophthalmia and in other instances they were just recovering from this disease; one girl about fourteen years of age, the mother and sister being prisoners on board, although rejected by me, was embarked barely convalescent from Acute Ophthalm; and in the confusion and bustle of arranging so many people was not observed for several days, the change of temperature and exposure brought on a relapse and although she recovered, the disease communicated itself to several of the others. By great attention to cleanliness, ventilation and the liberal use of the chloride of zinc the disease was checked and ultimately disappeared. A few cases of catarrhal ophthalmia presented themselves at the end of the voyage but were of no moment, the zinc was used twice a day in the morning with a mop to all parts of the prison and closets and in the evening the decks and closets were sprinkled with it, and so sensible were the prisoners to its utility in removing disagreeable odours that after a short time, they were regular in their attendance and as anxious to get the sprinkling stuff as I was to supply it. At first it was no easy matter to persuade them that pure air or cleanliness was conducive to their health and comfort; and when told to clean the Prison and perform their morning ablutions were inclined to refuse, one woman when ordered to wash a dirty, squalid child, replied "glory be to god she had reared nine of them and had never put a drop of water on one of them". All prisoners ought to have, previous to their being clothed in the Penitentiary for embarkation, a warm or tepid Bath, as many are found after being on board a few days to be in a most filthy state, this and other sanitary measures are too frequently overlooked by Government and other officers employed in prisons; (~~Governors and the other officers~~ had a pencil line through it and the words **the authorities** pencilled above- by whom unknown) another thing all children and others ought to be at least one month under their charge prior to embarkation, This would allow time for a slight improvement in their general health and if from any place where disease of a contagious nature prevailed it would in all probability become developed during that period.- As the Surgeons Superintendant are now ordered not to reject any convict capable of undertaking the voyage to Australia, I would suggest the propriety of directing the medical officers of prisons not to bring forward for examination any individual recovering from or recently recovered from serious or Contagious Affections. Women in an advanced stage of pregnancy or immediately after their confinement. Women who from disease or age have lost their teeth or those who have suffered from serious mental affections. One Lunatic was in a lucid interval embarked on board the "Blackfriar" she continued in a quiet state until the night before the vessel left Kingstown when she was reported to me to be in a very excited state, The Lord Lieutenants warrant was on board, and as it would have caused considerable detention to have her landed. I was compelled to place her under restraint and subsequently in a strait jacket, if by any chance she could extricate herself she would attack the nurses, bite and otherwise maltreated them until secured, after she recovered from the sea sickness the noise she made at night, not only disturbed the prisoners but every person on the ship. Some of the convicts (prisoners pencilled above) informed me that she was in the Infirmary belonging to the Penitentiary under treatment at the time the ship arrived at Kingstown. If this statement be correct the

medical officer was much to blame for sending her to Van Diemen's Land, there being too many of this and the old and useless class there already.

A great variety of cases came under treatment on the voyage but the prevailing diseases were constipation, ophthalmia and bowel complaints, the former were usually of some duration generally from eight to twelve and in one instance eighteen days without causing in the largest number anything more serious than loss of appetite etc, a strong purgative usually effected a cure. Ophthalmia generally yielded to purgatives and the solution of the nitrate of silver, but where inflammation was very acute, Blisters were had recourse to. Calomel and opium rehibited and in the ulcerative stage Quinine was found useful. This class of people cannot stand general blood letting.

The Bowel complaints I attributed to accumulation, change of diet, of climate and their using vinegar in their drink, this I was compelled to stop, soon after the ship left in consequence of its producing cramp of the stomach, but at their urgent request and on them promising to use it with their food it was again supplied to them, they soon began again to drink it and the consequence was Diarrhoea and in those who neglected themselves Dysentery. The vinegar being again stopped the disease became less frequent and towards the end of the voyage had almost disappeared –

Under the head Hysterical Mania (Case 11) a case is given by no means uncommon in female convict ships and in the Penitentiary in the colony, caused no doubt in nervous temperaments by the heat of climate, indolent life and last not least exciting the passions, requiring for it removal free purgation low diet and cold baths, nothing appeared to have a better effect than a shower bath or a few buckets of water thrown over them when first attacked.

The daily allowance of lime juice and sugar was, at the request of the prisoners, reduced from one ounce to one half ounce, to which was added half a gill of wine. This was found sufficient to keep them in health, and with the exception of one woman who could not be induced to drink it and in whom there was a slight scorbutic tendency, I venture to state a healthier, cleaner or more orderly set of women has not been landed at Hobart Town for many years.

John Moody
Surgeon Superintendent

Hobart Town
15th June 1851
